

**KYOCERA NIXKA INKJET SYSTEMS (KNIS)
WILL BE PRESENT AT DRUPA 2024 IN DUSSELDORF**

KNIS will exhibit its newly launched water based inkjet print engines dedicated to industrial players.

Aubagne, France, March 20, 2024: Kyocera Nixka is pleased to announce its participation to drupa 2024, which will take place in Dusseldorf, Germany between May 28 and June 7. We will be present on the Kyocera Corporation booth Hall 10 A11 with all our products, but also Hall 8A C20 on the Kyocera Document Solutions booth with a dedicated KNIS corner to introduce our products.

Visitors will be able to see our GENIX 1200 print engine, able to address full color or monochrome applications with a all-in-one PrinBox concept. The system can print 1200x1200dpi native with a grayscale mode up to 100m/min or 1200x600dpi up to 200m/min on a 108mm print width. With its embedded cleaning station, the system is easy to integrate, easy to use and easy to maintain, well designed for industrial applications such as decoration or personalization of paper, tissue or flexible packaging.

Our last LENIX 1200 print engine for wider print width in monochrome or full color will also be visible. LENIX has the same resolution and speed than GENIX, and can propose print width from 216mm to 866mm with a single PrintBar. It is a modular and scalable print engine adapted to packaging, publishing or other markets requiring high quality digital printing with water based inks.

Both systems are using the last Kyocera KJ4B-EX1200-RC printhead from our mother company enabling ink recirculation for a wider range of application and fewer maintenance operations.

Remy Mendil, Product & Marketing Manager to comment: "Drupa is a legendary tradeshow and after 8 years without a physical event, everybody is waiting for it. It was very important for KNIS to participate and to show how our products GENIX and LENIX print engines can help industrial players to step ahead regarding manufacturing processes optimization and environmental impact improvement. The Kyocera Nixka team is impatient to exchange with all customers, prospects and visitors about their exciting projects and products!"

But stay tuned, it seems that a new KNIS inkjet wave is coming...

About KYOCERA NIXKA Inkjet Systems S.A.S. (KNIS):

KNIS (<https://www.kyocera-nixka.com/>) is the entity created in April 1st 2023,

- from NIXKA S.A.S., established in 2020, which developed, manufactured and sold high-efficiency, high-quality inkjet print engines and systems with more than 30 years of experiences, and with the differentiating advantage of integrated services that target specific customer needs,
- and becoming 100% part of KYOCERA Corporation (<https://global.kyocera.com/>), the parent and global headquarters of the Kyocera Group, which was founded in 1959 as a producer of fine ceramics (also known as “advanced ceramics”). By combining these engineered materials with metals and integrating them with other technologies, Kyocera has become a leading supplier of industrial and automotive components, semiconductor packages, electronic devices, smart energy systems, printers, copiers, and mobile phones.
